

LANDA®

Cool Bypass

LANDA'S PATENTED SOLUTION TO SUPER-HEATED WATER

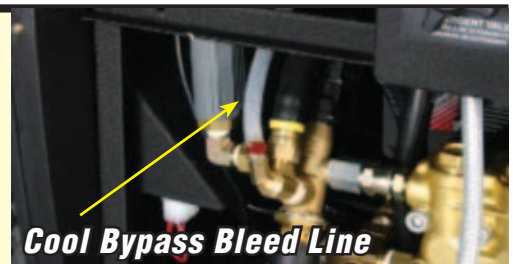

THE HOT PROBLEM

Hot-water pressure washers require a way to release or cool-down hot water while the unit is in by-pass mode. Failure to control the temperature of water can result in superheated water, which can cause significant damage to the pressure washer in a matter of minutes, including damage to the pump and unloader.

Landa's patented* **Cool Bypass** system effectively routes superheated water, preventing pump damage and watertank detergent contamination. A simple solution, lengthening the life of your pressure washer.
